

The publishing workflow

From an approved source document to an accepted submission.

Six steps

#	STEP	WHAT COMES OUT OF IT
1	Source intake	A manifest of every document, with its owner
2	Gap check	What is missing, before anyone builds
3	Build	The dossier, assembled to regional structure
4	Validate	A clean technical validation report
5	Review	Client sign-off, tracked against the manifest
6	Submit	Receipt, and an archive that can be re-used

What makes it slip

- Source documents that arrive without an owner.
- Validation left until the end, when a fix costs a week.
- Regional structure decided after the build has started.
